DEVELOPING AI TOOLS FOR K-12

These original software products were developed in Fall 2024 by students at UTSA to teach key ideas in Artificial Intelligence, including machine learning, image reconstruction, text processing, and recommender systems. We hope that you enjoy interacting with them!

Drs. Fred Martin and Ismaila Sanusi, Computer Science

Dr. Deepti Tagare, Interdisciplinary Learning & Teaching

ClawAl

Yeshaswini Parvatham & Aishat Kolawole

"Win" items from a virtual claw machine by describing them to an AI! The tool uses an AI model to classify player descriptions and match to items displayed in the claw machine.

Into the Rabbit Hole *

Durga Rajarajan

Help the rabbit find carrots and learn about two key search algorithms: Depth First Search and Breadth First Search.

Virtual Escape Room

Pilar Mejia and Alex Lemire

Use AI-powered prompt engineering to find your way out of any of three adventure scenarios!

Next Word Adventure *

Saniya Vahedian Movahed

Explore how computer programs predict the next word with "n-grams," sequences of repeated words.

> * Project was developed by a research student of Dr. Martin outside of course structure and was demonstrated with the others at the AI Expo

Pick-A-Book

Lawrence Holland, Jules Valle, and Desiree Salazar

Learn how recommender systems work by modifying meta-data in a virtual library.

PolluSpot

Tawakalitu Afoluwaso Giwa

ROWDY AI Save the Earth Elif Ercek

Train an AI system to recognize polluted and unpolluted images and see the results of your training in the system's own analysis of new images.

Race Against Al

Travis Irwin and Angel Bernal

Compete against AI in a race where the faster you can draw objects which reach the required threshold, the faster your car will go. Uses Google Teachable Machine to do the drawing recognition.

Tech Park 3D Construction

Shahzaib Zaveri and Andres Marin

Please attempt to rotate the object...

Select images of the objects such as pool, volleyball field, trees, swings to populate a playground; create your own 3D model by showing images of real objects to the computer via webcam.
